PROJECT 3 / FINAL PRESENTATION

VC Startup Screening Agent

Startup name and website → Screening report

Sandra Obregón · Venture Capital · Built with LangGraph

The problem and who has it

WHO

Venture capital analysts

They review B2B startups at Pre-Seed and Seed.

WHAT THEY DO TODAY

Search several websites

They compare company pages, news and other public sources.

THE PAIN

2–4 hours per startup

Estimated manual review time.

A single report helps analysts decide whether to invite a startup to a first meeting.

How it works

Enter

Name and website

Collect

Public sources

Check

Evidence and rules

Build

Screening report

Deliver

Markdown file

Live demo with Kalipso

Start the agent

Follow the research and checks

Open the report and one source

What the analyst receives

Company	Geography	Funding stage
Kalipso	Meets (Spain)	Meets (Seed)
Lawra	Not verified	Not verified

Each report lists sources and shows what still needs review.

Kalipso’s product readiness and traction still need review.

Technical specifications

LangGraph and Python	Keep evidence available across steps
GPT-4o mini	Extract headquarters and funding evidence
Tavily, Jina Reader, GDELT	Search the web, read pages and find news
Local fund rules and quotes	Check evidence and save the Markdown report
GDELT rate limit	Retry once, then continue with available sources

Go-to-market sprints

Pilot with one VC team

Professional introduction and a two-week pilot

Targets · 25% less analyst time and 4 of 5 reports rated useful

---

Reach more teams through accelerators

Introductions from two accelerator managers

Targets · 3 demos, 2 teams agree to try it, 1 team reviews 3 reports

Thank you.
